INSTALLATION GUIDE

TECHNICAL SPECIFICATIONS:

Material Types
All extruded components:

6005A-T61 or 6061-T6 Aluminum

Hardware: Stainless Steel

Bonding and Grounding: Integrated in

Microrail™ (Trimrail™ and row to row bonding

require additional components)

TOOLS REQUIRED OR RECOMMENDED FOR LAYOUT, FLASHINGS & ROOF ATTACHMENTS:

- Hammer
- Marker / crayon
- Measuring tape
- Drill
- Pilot drill bit
- Pry bar
- String line

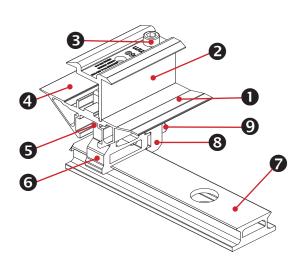

TOOLS FOR MODULE INSTALL:

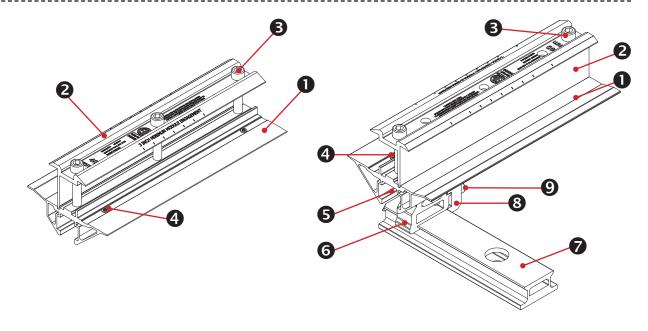

- Drill and socket adapter or socket wrench
- 1/2" socket
- 1/4" hex driver
- Torque wrench

SAFETY: All applicable OSHA safety guidelines should be observed when working on a PV installation job site. The installation and handling of PV solar modules, electrical installation and PV racking systems involves handling components with potentially sharp metal edges. Rules regarding the use of gloves and other personal protective equipment should be observed.

TORQUE SPECIFICATIONS:			
All SFM Hardware	20 ft-lbs		
Grounding lugs	Per Page "0"		

SUNFRAME Microrail™ - 3"

Sub-Components:

- 1. 3" Base
- 2. 3" Cap
- 3. Clamp Socket Head Cap Screw
- 4. Bonding Pin
- 5. Helix
- Tower
- 7. 6.75" Slider
- 8. Dovetail Lock
- 9. Dovetail Bolt

Functions:

1 or 2 module support to roof attachment

Features:

- Arrives on-site pre-assembled and ready for installation
- Cap indicates module height compatibility
 - Supports discrete module thicknesses from 32mm to 46mm
- Receiving feature that allows simple module placement, tightening of fasteners and eliminates working over modules.

SUNFRAME Microrail™ 9" Splice

Sub-Components:

- 1. 9" Base
- 2. 9" Cap
- 3. (3) Clamping Socket Head Cap Screws
- 4. Bonding Pins

Functions:

- 2,3 or 4 module support & connection
- E-W module to module bonding

Features:

- Arrives on-site pre-assembled and ready for installation
- Cap indicates module height compatibility
 - Supports discrete module thickness from 32mm to 46mm
- Receiving feature that allows simple module placement, tightening of fasteners and eliminates working over modules.
- Does not require attachment to roof

SUNFRAME Microrail™ 9" Attached Splice

Sub-Components:

- 1. 9" Base
- 2. 9" Cap
- 3. (2) Clamp Socket Head Cap Screws
- 4. Bonding Pins
- 5. Helix
- 6. Tower
- 7. 6.75" Slider
- 8. Dovetail Lock
- 9. Dovetail Bolt

Functions:

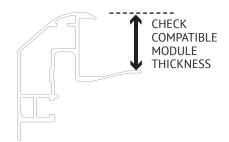

- Module to roof attachment (when attachment is necessary at splice point)
- E-W module to module bonding

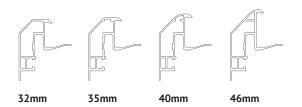

Features:

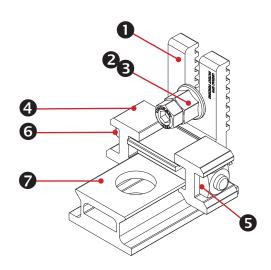

- Arrives on-site pre-assembled and ready for installation
- Cap indicates module height compatibility
 - Supports discrete module thickness from 32mm to 46mm
- Receiving feature that allows simple module placement, tightening of fasteners and eliminates working over modules.

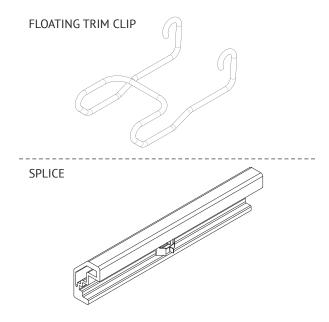

Trimrail™

Functions:

- Required front row structural support
- Module mounting
- Installation aid
- Aesthetic trim

Features:

- Mounts directly to L-feet
- Aligns and captures module leading edge
- Available for various module heights
 - Supports discrete module thicknesses from 32mm to 46mm

Trimrail™ Roof Attachment

Sub-Components:

- 1. Trimrail roof attachment
- 2. Hex bolt and Tri-drive nut
- 3. Tri-drive nut
- 4. Dovetail locks
- 5. Square nut
- 6. Clamp bolt
- 7. 3" Slider

Functions:

Attach Trimrail™ to roof attachment / flashing

Features:

- Slots provide vertical adjustments to level array
- Slider provides north/south adjustment along the slope of the roof.

Floating Trim Clip

Functions:

 Attaches Trimrail[™] to module when fewer than 2 rafter attachment points are available

Features:

- Compatible with all Trimrail™ profiles
- Tool-less installation

Trimrail™ Splice

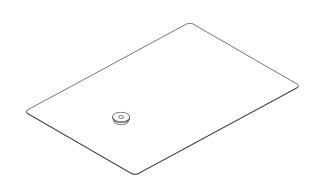

Functions:

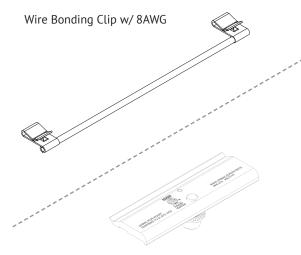

- Front row structural support
- Installation aid
- Structurally connects 2 pieces of Trimrail[™]

Features:

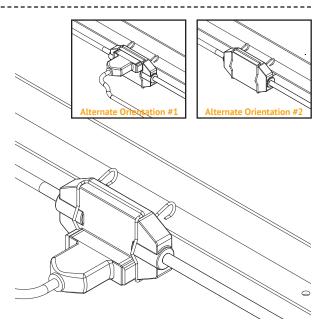

- Aligns and connects Trimrail[™] pieces
- Compatible with all Trimrail[™] profiles
- Tool-less installation

SFM Flat Flashing

Functions:

- Patented roof sealing technology at roof attachment point
- For use with compatible 3" & 6.75" SFM Sliders (See Unirac Master Price List for details)

Features:

- Integrated EDPM Rubber Bushing
- Manufactured by EcoFasten Solar

Wire Bonding Clip w/ 8AWG

Functions:

- Row to row bonding
- Module to Trimrail[™] bonding
- Single Use Only

Features:

No fasteners required

MLPE Mounting Assembly

Functions:

- Securely mounts MLPE to module frames
- MLPE to module bonding

Features:

- Mounts easily to typical module flange
- UL2703 Recognized

MLPE = Module Level Power Electronics, e.g. microinverter or power optimizer

Enphase Engage Cable Clip

Functions:

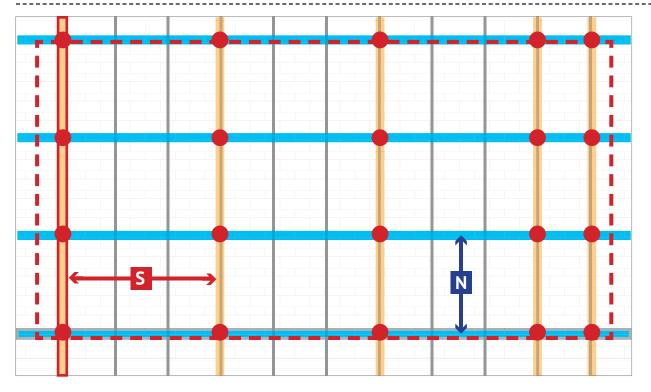

- Securely attaches Enphase Engage cables to module flanges
- Allows three (3) mounting positions to suit any cable orientation

Features:

· Resists sliding to reduce cable slack

2. Select starting course of shingles (or tiles)

Mark next row of attachments and repeat for remaining rows

- NS distance equals module width +1"

4. Locate 1st rafter closest to array edge (and inside array footprint) and mark

5. Find next rafter for attachment based on appropriate span

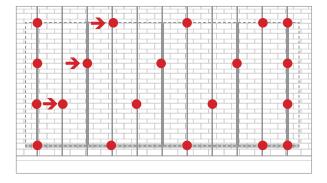

- Continue to end of array

- Mark last rafter before end or array

S Span

6. Mark attachment points on rafters along each NS module grid line

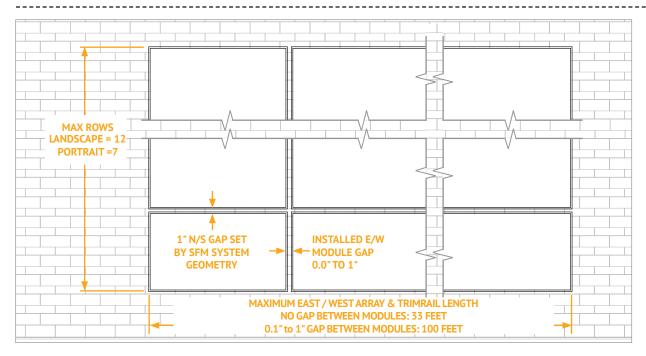

7. Refer to Unirac SFM D&E Guide and U-Builder for allowable spans and cantilevers.

TO STAGGER ATTACHMENTS: Shift each subsequent row of attachments one rafter over.

THERMAL EXPANSION LIMITS | FINSTALLATION GUIDE | PAGE

NORTH-SOUTH THERMAL EXPANSION LIMITS:

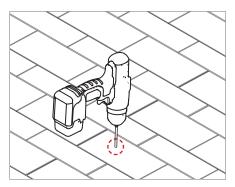

- 12 Rows of modules Landscape orientation
- 7 Rows of modules Portrait Orientation

EAST-WEST THERMAL EXPANSION LIMITS:

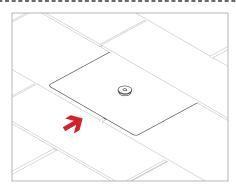

- 33ft. with no module gap (butted modules)
- 100ft. with a minimum module gap of 1/8"

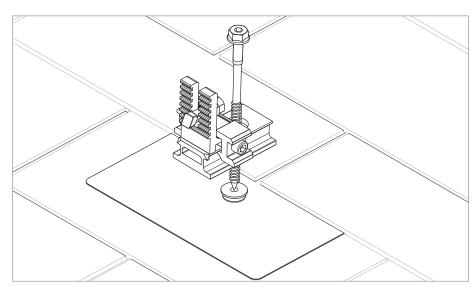

FLASHING & SLIDERS | GINSTALLATION GUIDE | PAGE

PILOT HOLES: Drill pilot holes for lag screws or structural screws (as necessary)

FLASHINGS: Place flashings

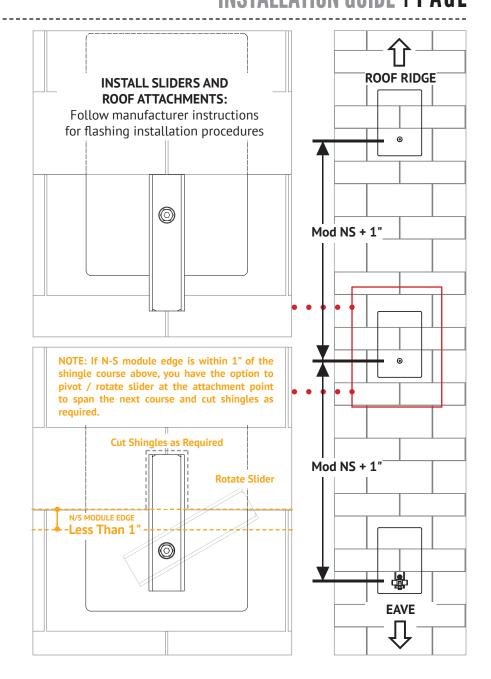

INSTALL SLIDERS AND TRIMRAIL ROOF ATTACHMENTS:

• Insert flashings per manufacturer instructions

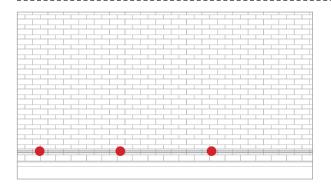

NOTE: Use Lag screw or structural fastener with a maximum diameter of 5/16"

- Attach sliders to rafters
- Verify proper row to row spacing for module size (Mod NS + 1")
- Ensure that Trimrail™ roof attachments in each row have sufficient engagement with slider dovetails for proper attachment.

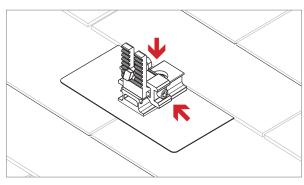

1ST ROW INSTALLATION INSTALLATION GUIDE PAGE

ALIGN FRONT ROW:

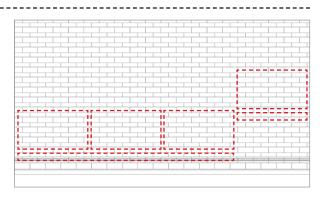

Align front row $\mathsf{Trimrail}^\mathsf{TM}$ roof attachments with string line

TIP: Pull String-line across back (smooth) edge of attachments

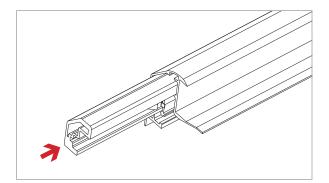

TIGHTEN SLIDER:

Tighten front row lag screw and Trimrail™ roof attachments dovetail clamp bolt.

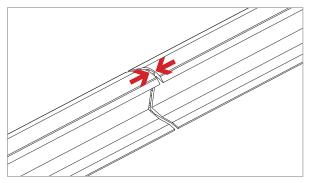

TRIMRAIL PREPARATION:

Determine overall length of Trimrail[™] for front row. Determine splice locations (if any) and Trimrail[™] lengths required. When 2 or less attachment points are available at front of module edge, a Trimrail floating clip may be required, see page (K) for details.

INSTALL TRIMRAIL SPLICE BARS: Place TrimrailTM with front side up and firmly insert splice bar into TrimrailTM, until it clicks.

NOTE: Do not over-insert splice

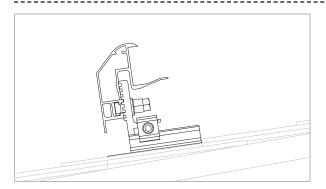

ATTACH SPLICE BARS: While holding Trimrail[™] sections in alignment, join sections together with splice bar centered at joint. Bonding between trim sections occurs through the splice bar.

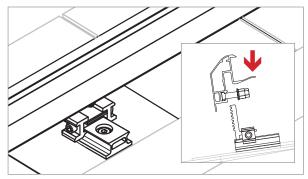

See the Design and Engineering Guide for details on regional max spans and overhang.

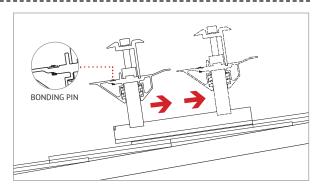

MICRORAIL INSTALLATION | PAGE

TRIMRAIL ROOF ATTACHMENTS & TRIMRAIL ORIENTATION: Trimrail™ roof attachment should have horizontal flange facing uphill for uniform row spacing and ease of lag screw assembly. On first row, position Trimrail™ with module catch side facing uphill.

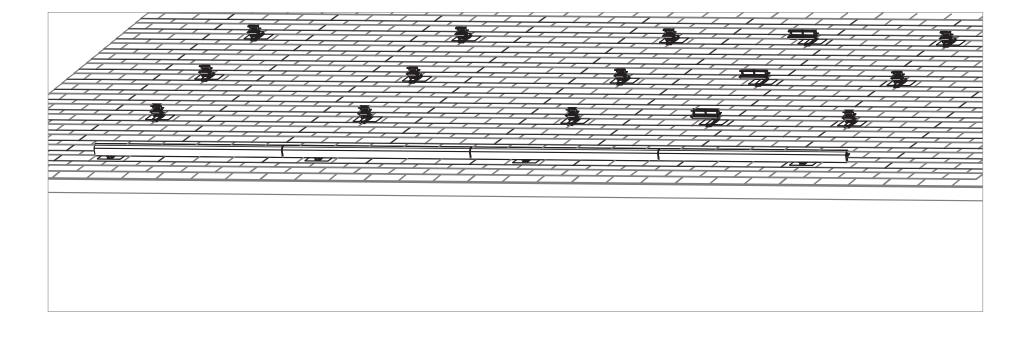

ATTACH TRIMRAIL TO ROOF ATTACHMENT: Attach rail using 3/8" hex bolt & Tri-drive nut and serrated flange nuts. Make sure Trimrail™ is level across all Trimrail™ roof attachments. After rail is level, tighten dovetail bolts to secure Trimrail™ roof attachments to sliders.

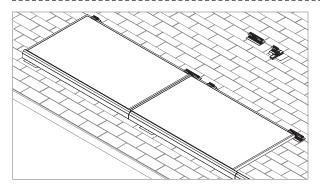

INSTALL MICRORAILS: Install remaining Microrails at marked attachment points. Loosen dovetail retaining fastener and push Microrail[™] to top of slider. **DO NOT SLIDE ALL THE WAY OFF SLIDER.**

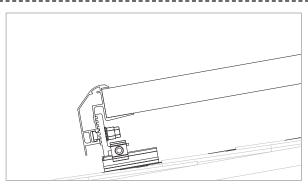

NOTE: Bonding pin on Microrails should be positioned downslope.

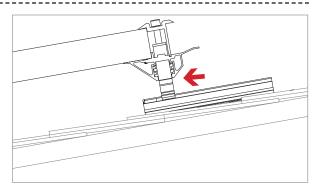

LAY IN MODULE(S): Install first two (2) modules on bottom row. Install downhill end of module into the TrimrailTM first and then position uphill 3" microrails to support modules.

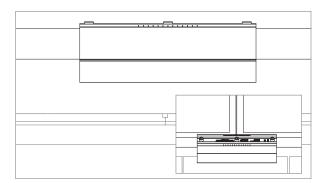

LAY IN MODULE(S): Module should slide into catch feature of the TrimrailTM.

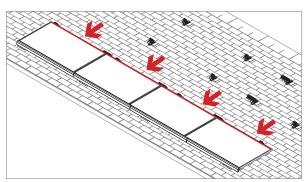

SEAT MODULE(S): Ensure that modules are properly seated in top cap and base.

Wire management is performed after each row of modules is installed. Refer to wire management section (pp. L & M) for detailed instructions.

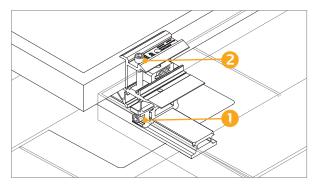

ATTACH SPLICE: Attach splice at intersection of two (2) modules.

- Use attached splice if necessary.
- Ensure minimum module engagement using indicator marks.

FASTEN MODULES: Finish installing modules along row and tighten fastening bolts after entire row is installed.

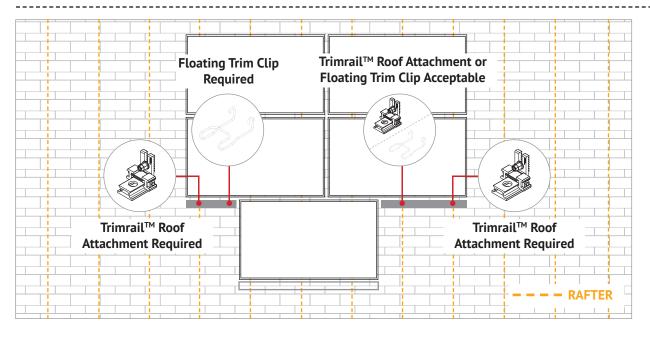

TIGHTEN FASTENERS: Tighten fasteners to required torque.

NOTE: Tighten components from the roof up, **①** Dovetail Bolt then **②** Clamp Socket Head Cap Screw

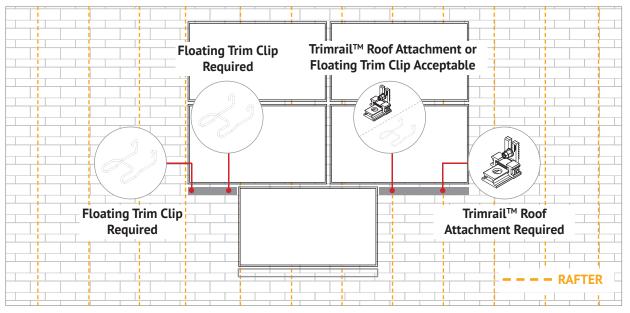

FLOATING TRIM INSTALLATION | KINSTALLATION GUIDE | PAGE

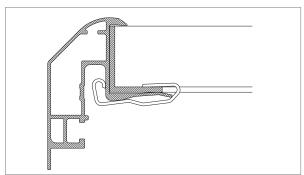

REQUIREMENTS FOR TRIMRAIL ROOF ATTACHMENTS & FLOATING TRIM CLIP:

Trimrail™ Roof Attachments shall be used at rafters nearest to outside edge of array.

- Use Floating Trim Clip on the longest "free" side if only one (1) Trimrail™ Roof Attachment is utilized.
- Use of 2 Floating Trim Clip(s) without a Trimrail[™] Roof Attachment is acceptable if the section of Trimrail[™] being mounting is less than 24" and there are no available roof attachment points.

SECURING TRIMRAIL WITH FLOATING TRIM CLIPS:

When necessary, use floating trim clips to secure trimrail to module. Installation should occur after module is secured. Floating Trim Clip captures module flange and clips inside of trimrail as shown above.

MICROINVERTER & WIRE MGMT. | INSTALLATION GUIDE | PAGE

PRE-INSTALL MLPE: Install MLPE in a location on the module that will not interfere with microrails or grounding lugs. To use trunk cable most efficiently, install MLPE components in the same locations on all modules in the same row.

ABOVE IMAGE: MLPE mount w/ microinverter & wire management BELOW IMAGE: MLPE mount w/ power optimizer & wire mgnt.

MLPE MOUNTING LOCATION & WIRE MANAGEMENT: Install the

MLPE Mount on the short side of the module when mounting in

landscape orientation. Install MLPE Mount on the long side of

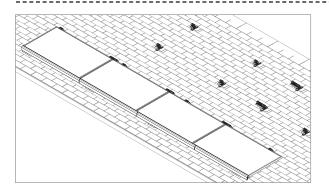

module when mounting in portrait orientation.

TORQUE VALUE: 20FT-LBS (SEE NOTE ON PAGE A)

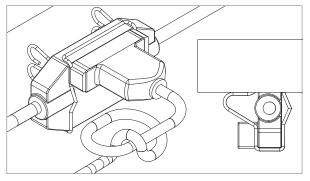

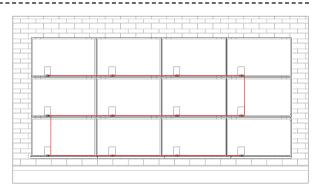

MICROINVERTER & WIRE MGMT. | MINSTALLATION GUIDE | PAGE

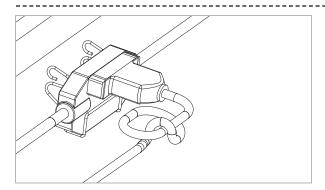

MICROINVERTER: Before installing a row of modules place microinverter trunk cable.

MICROINVERTER CONNECTION: Before securing a module to the Microrails, install trunk cable mounting clip on the connector block. Attach clip to module flange. Plug microinverter into connector.

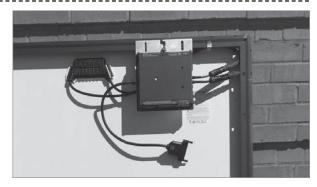

WIRE MANAGEMENT: Verify wire management is complete after each row is installed.

TIPS & TRICKS: Tie a loose knot in the microinverter Engage connector wire to help manage the length.

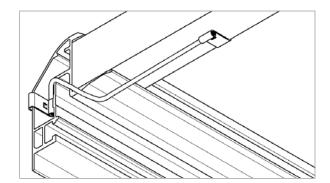

MICROINVERTER TRUNK CABLE: The trunk cable can be managed securely by using stainless steel wire management clips attached to the module frame.

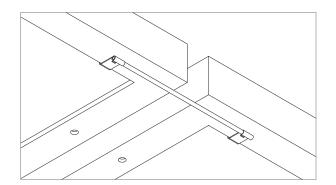

TIPS & TRICKS: Twisting the PV module wires and / or tying a loose knot can also help manage these wires.

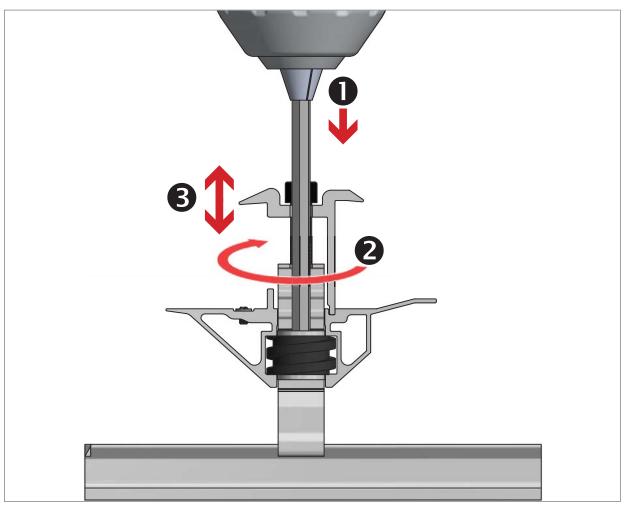

TRIMRAIL BONDING: Attach a bonding clip from the Trimrail[™] to an adjacent module. Fully seat bonding clip until radius portion is in contact with Trimrail[™] mating surface and module flange.

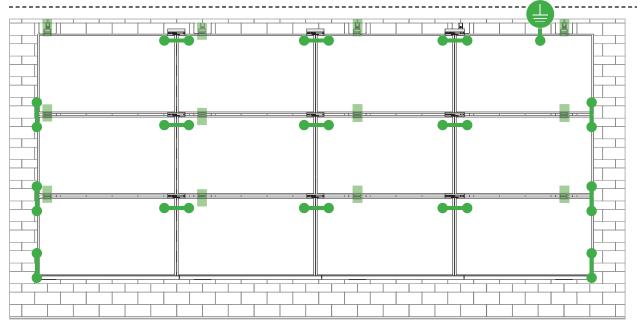

N/S Bonding Clip: A N/S bonding clip must be used to bond adjacent rows of modules together.

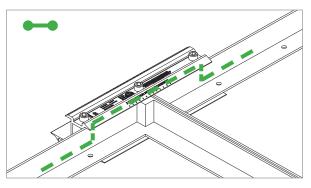

POST INSTALL HEIGHT ADJUSTMENT: Height adjustment of each attached Microrail™ assembly can be performed by inserting a long 1/4" hex drive through the cap and into the helix. **CAUTION: DO NOT RAISE THE BASE HIGHER THAN THE TOP OF THE TOWER.**

SYSTEM BONDING & GROUNDING PAGE

E-W BONDING PATH: E-W module to module bonding is accomplished with 2 pre-installed bonding clips which engage on the secure side of the Microrail[™] and splice.

TERMINAL TOROUE, **Install Conductor and** torque to the following:

4-6 AWG: 35in-lbs 8 AWG: 25 in-lbs 10-14 AWG: 20 in-lbs

LUG DETAIL & TORQUE INFO

Ilsco Lay-In Lug (GBL-4DBT)

- 10-32 mounting hardware
- Torque = 5 ft-lb
- AWG 4-14 Solid or Stranded

TERMINAL TOROUE, Install Conductor and torque to the following: 4-14 AWG: 35in-lbs

LUG DETAIL & TORQUE INFO

Ilsco Flange Lug(SGB-4)

- 1/4" mounting hardware
- Torque = 75 in-lb
- AWG 4-14 Solid or Stranded

WEEBLUG Single Use Only

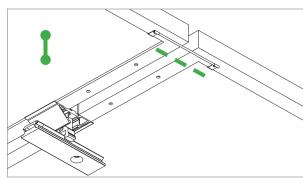

TERMINAL TOROUE, Install Conductor and torque to the following: 6-14 AWG: 7ft-lbs

LUG DETAIL & TORQUE INFO

Wiley WEEBLug (6.7)

- 1/4" mounting hardware
- Torque = 10 ft-lb
- AWG 6-14 Solid or Stranded

N-S BONDING PATH: N-S system bonding is accomplished through a N-S bonding clip. Insert each end of the N-S bonding clip onto a module frame flange. System is bonded with a single array edge, however it is recommended that N-S bonding clips be installed on both edges for ease of maintenance (see also: Maintenance Page S)

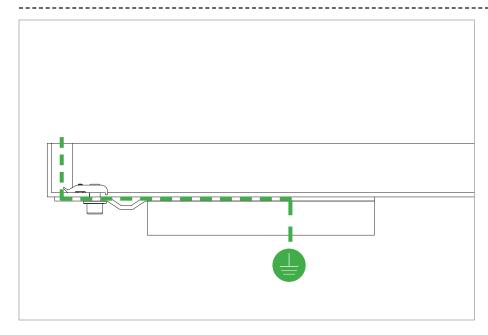

NOTE: ISOLATE COPPER FROM ALUMINUM CONTACT TO PREVENT CORROSION

System bonding is accomplished through modules. System grounding accomplished by attaching a ground lug to any module at a location on the module specified by the module manufacturer.

ENPHASE MICROINVERTER GROUNDING P

SFM EQUIPMENT GROUNDING THROUGH ENPHASE MICROINVERTERS

The Enphase M215 and M250 microinverters have integrated grounding capabilities built in. In this case, the DC circuit is isolated from the AC circuit, and the AC equipment grounding conductor (EGC) is built into the Enphase Engage integrated grounding (IG) cabling.

In order to ground the SunFrame Microrail racking system through the Enphase Microinverter and Engage cable assembly, there must be a minimum of three PV modules connected to the same trunk cable within a continuous array. Continuous array is defined as a grouping of modules installed and electrically bonded per the requirements of this installation guide. The microinverters are bonded to the SunFrame Microrail via the mounting hardware. Complete equipment grounding is achieved through the Enphase Engage cabling with integrated grounding (IG). No additional EGC grounding cables are required, as all fault current is carried to ground through the Engage cable.

UL CODE COMPLIANCE NOTES | Q INSTALLATION GUIDE | PAGE

SYSTEM LEVEL FIRE CLASSIFICATION

The system fire class rating requires installation in the manner specified in the SUNFRAME MICRORAIL (SFM) Installation Guide. SFM has been classified to the system level fire portion of UL 1703. This UL 1703 classification has been incorporated into the UL 2703 product certification. SFM has achieved Class A, B & C system level performance for low slope & steep sloped roofs when used in conjunction with type 1 and type 2 modules. Class A, B & C system level fire performance is inherent in the SFM design, and no additional mitigation measures are required. The fire classification rating is valid for any roof pitch. There is no required minimum or maximum height limitation above the roof deck to maintain the Class A, B & C fire rating for SFM. SUNFRAME MICRORAIL™ components shall be mounted over a fire resistant roof covering rated for the application.

Module Type	Roof Slope	System Level Fire Rating	Microrail Direction	Module Orientation	Mitigation Required
Type 1 and Type 2	Steep Slope & Low Slope	Class A, B & C	East-West	Landscape OR Portrait	None Required

UL2703 TEST MODULES

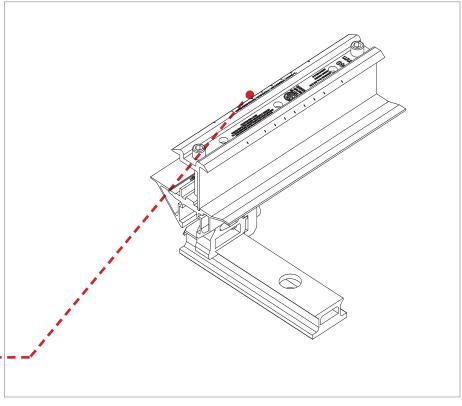

See page "R" for a list of modules that were electrically and mechanically tested or qualified with the SUNFRAME MICRORAIL (SFM) components outlined within this Installation Guide.

- Maximum Area of Module = 17.98sqft
- UL2703 Design Load Ratings:
 - a) Downward Pressure 33 PSF
 - b) Upward Pressure 33 PSF
 - c) Down-Slope Load 10 PSF
- Tested Loads:
 - a) Downward Pressure 50 PSF / 2400 Pa
 - b) Upward Pressure 50 PSF / 2400Pa
 - Down-Slope Load 15 PSF / 720 Pa
- Maximum Span = 6ft
- Use with a maximum over current protection device OCPD of 30A

LABEL MARKINGS

- System fire class rating: See installation instructions for installation requirements to achieve a specified system fire class rating with Unirac.
- Unirac SUNFRAME MICRORAIL™ is listed to UL 2703.
- All splices within a system are shipped with marking indicating date and location of manufacture.

1. Loosen 9" splice bolts approximately 3 turns. **DO NOT REMOVE.**

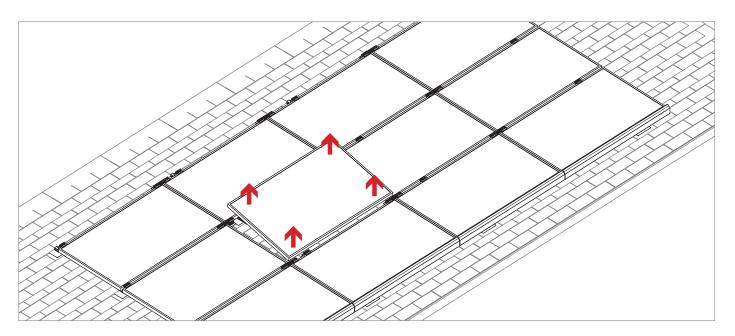

2. Remove bolts and caps from 3" Microrails and attached splices

3. Slide splices away from the module to be removed

4. Lift module and disconnect MLPE cables

5. Remove Module. Reverse steps to replace module removed.

Bonding note: If both sides of array are bonded with NS Bonding Clips, as recommended, then no additional bonding is required for module maintenance.

If necessary, on the row of modules containing the module being removed, one additional bonding clip can be added to the edge of the array opposite of the edge with bonding clips already installed.

CONSIDERATIONS & MAINTENANCE | TIME | PAGE

ELECTRICAL CONSIDERATIONS

SUNFRAME Microrail is intended to be used with PV modules that have a system voltage less than or equal to that allowable by the NEC. A minimum 10AWG, 105°C copper grounding conductor should be used to ground a system, according to the National Electric Code (NEC). It is the installer's responsibility to check local codes, which may vary.

INTERCONNECTION INFORMATION

There is no size constraint beyond structural thermal expansion limits on how many SUNFRAME Microrails & PV modules can be mechanically interconnected for any given configuration, provided that the installation meets the requirements of applicable building and fire codes.

GROUNDING NOTES: The installation must be conducted in accordance with the National Electric Code (NEC) and the authority having jurisdiction. Please refer to these resources in your location for required grounding lug quantities specific to your project. The grounding / bonding components may overhang parts of the array so care must be taken when walking around the array to avoid damage. Conductor fastener torque values depend on conductor size. This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instruction

PERIODIC INSPECTION: Conduct periodic inspections for loose components, loose fasteners or any corrosion, immediately replace any affected components.
